HAKKIMIZDA

ORVAL HİDROLİK Endüstride ve sanayide kullanılan ve üretilen makine, sistem ve ekipmanları, Tarim aletleri, denizcilik sektörleri, mobil vinçler, çöp kamyonları gibi sektörlerde önemli yer tutan hidrolik yön kontrol valfleri ile ilgili tüm ihtiyaçlarları karşılayabilmek amacıyla 1996 yılında kurulmuştur.

Kurulduğu yıldan bu yana dünyanın ulaşmış olduğu en son teknolojiyi, bu teknolojilerin uygulanması için gerekli bilgi ve ürün tedarikini sağlayarak, faaliyet gösterdiği Hidrolik ürünlerin imalatı konularında faaliyet göstermektedir.

En iyi hizmet, en iyi müşteri memnuniyeti, en iyi piyasa ilişiklerinin sağlanması hedefi ile uzun süreler Türk ve Dünya endüstrisine katkıda bulunmak ve ihtiyaçlara ''Çözüm ortağı, Teknoloji Partneri'' ile buluşturmaktan mutluluk duyarız.

ABOUT US

ORVAL HYDRAULIC was established in 1996 in order to meet all the demands related to hydraulic directional control valves, which have an important role in sectors such as machinery and machine systems and equipment used and produced in industry, agricultural tools, maritime sectors, mobile cranes, garbage trucks.

Since its establishment, it has been operating in the production of hydraulic products, by providing the latest technology that the world has reached, the information and product supply necessary for the application of these technologies.

With the aim of providing the best service, the best customer satisfaction and the best market relations, we are happy to contribute to the Turkish and World industry for a long time and to meet the needs with "Solution Partner, Technology Partner".

Features

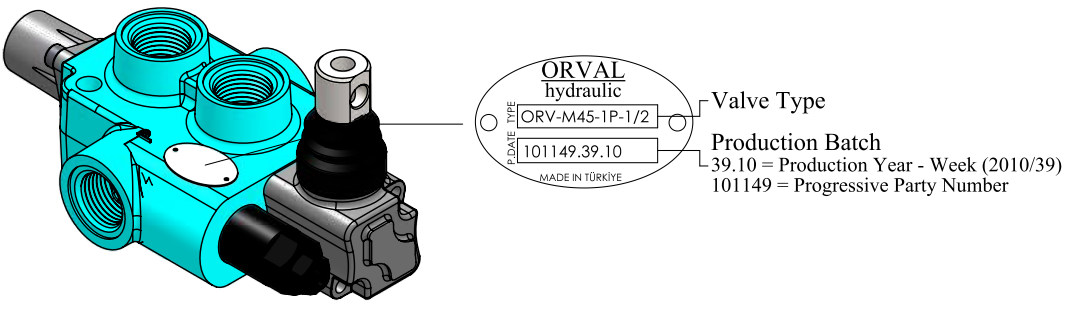

- This valve is only one section for open center and close center hydraulic systems.
- Fitted with a main pressure relief valve.
- Interchangeable spool diametre is 16 mm – 0,63 in.
- Avaible manual and pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-M40 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

• Before painting, ensure plastic port plugs are tightly in place.

INSTALLATION AND MAINTENANCE

The ORV M45 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking, mount the product on a flat surface;

• In order to prevent the possibility of water entering to the lever box and spool control kit, do not use high pressure wash down directly on the valve;

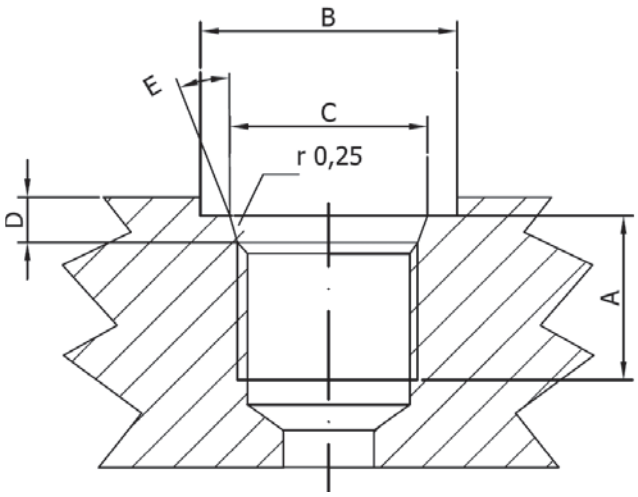

• Before painting, ensure plastic port plugs are tightly in place.

Features

• Simple, compact and heavy duty designed monoblock valves from 1 to 7 sections for open and closed center hydraulic systems.
• Fitted with a main pressure relief valve and a load check valve.
• Optionaly Carry-Over port only parallel circuit.
• Interchangeable spool diameter is 16 mm – 0,63 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV MS45 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking, mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

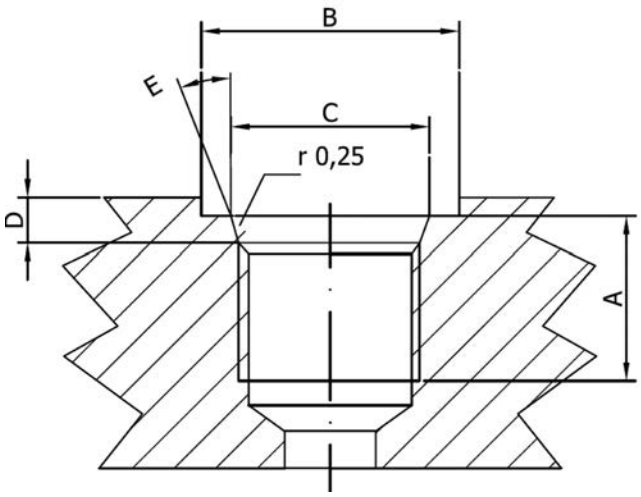

• Before painting, ensure plastic port plugs are tightly in place.

INSTALLATION AND MAINTENANCE

The ORV M70 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

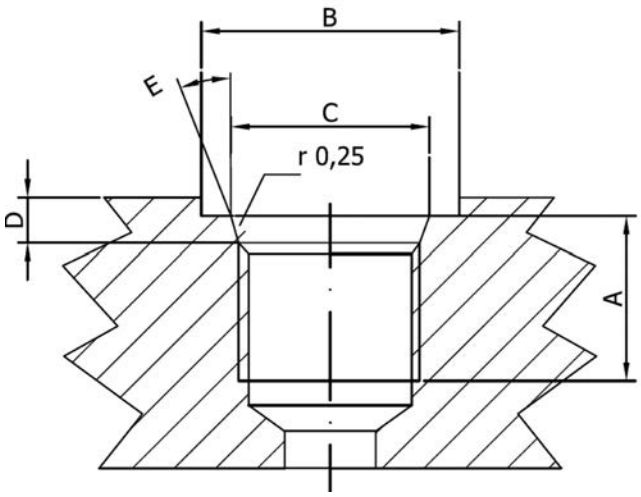

• Before painting, ensure plastic port plugs are tightly in place.

Features

• Simple, compact and heavy duty designed monoblock valves from 1 to 6 sections for open and closed center hydraulic systems.
• Fitted with a main pressure relief valve.
• Optionaly Carry-Over port only tandem circuit.
• Interchangeable spool diametre is 18 mm – 0,71 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV M80 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

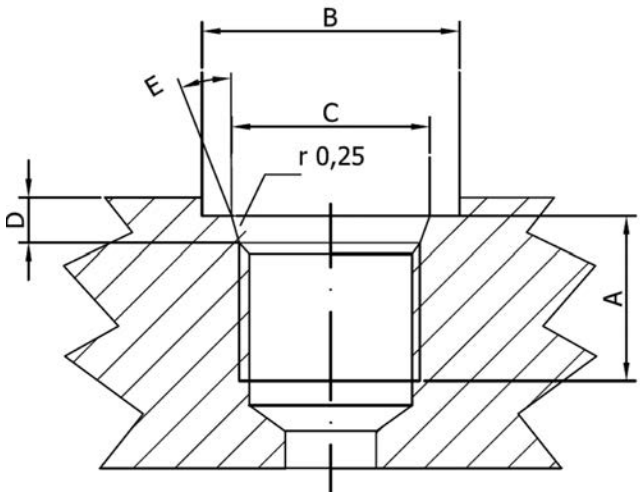

• Before painting, ensure plastic port plugs are tightly fitted.

Features

- Simple, compact and heavy duty designed monoblock valves from 1 to 6 sections for open and closed center hydraulic systems.
- Fitted with a main pressure relief valve and a load check valve.
- Optionaly Carry-Over port only parallel circuit.
- Interchangeable spool diameter is 18 mm – 0,71 in.
- Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV M100 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

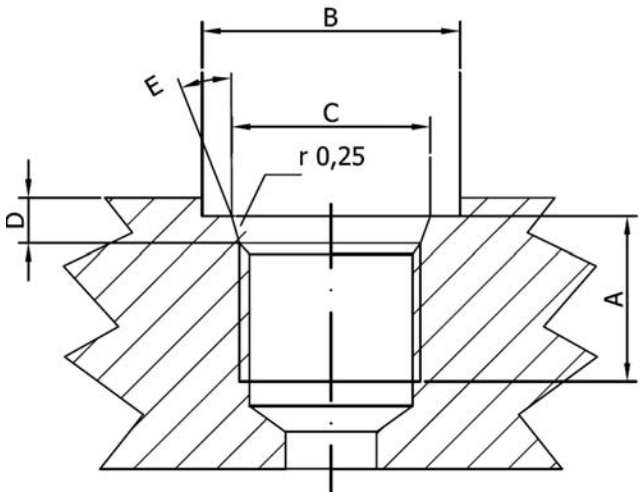

• Before painting, ensure plastic port plugs are tightly in place.

INSTALLATION AND MAINTENANCE

The ORV-PD45 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

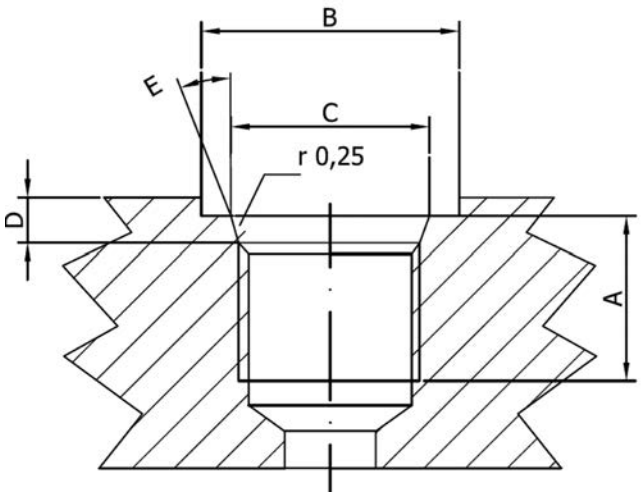

• Before painting, ensure plastic port plugs are tightly fitted.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 16 mm – 0,63 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD60 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

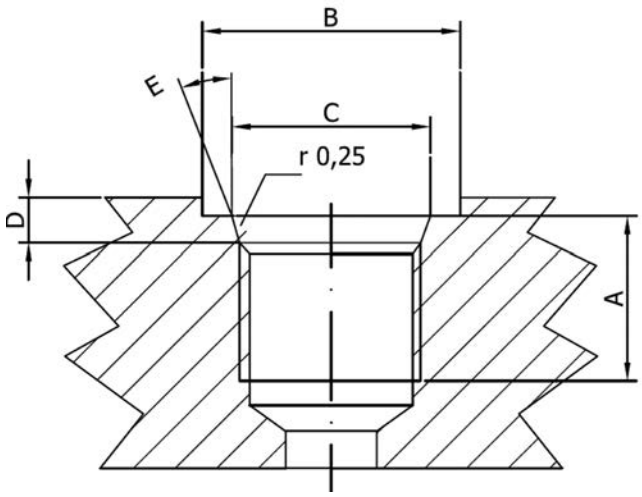

• Before painting, ensure plastic port plugs are tightly fitted.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 18 mm – 0,71 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD80 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

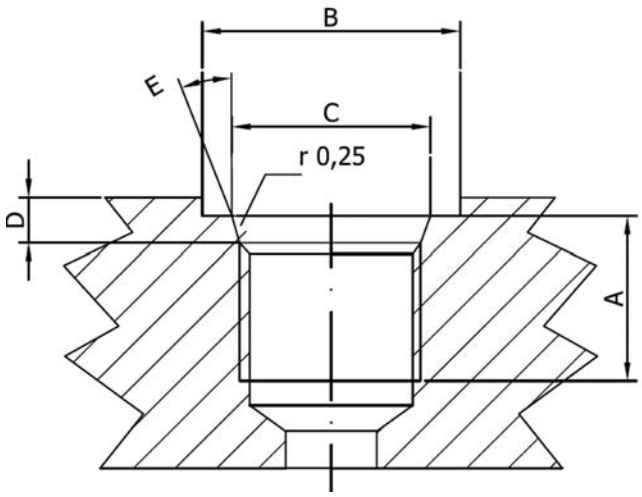

• Before painting, ensure plastic port plugs are tightly fitted.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 20 mm – 0,79 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD100 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

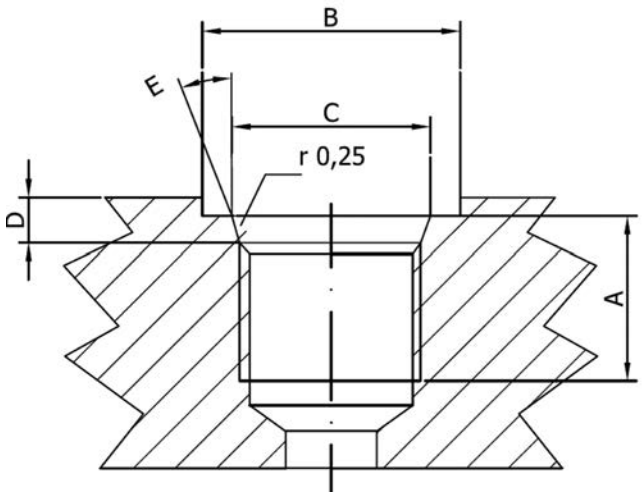

• Before painting, ensure plastic port plugs are tightly in place.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 20 mm – 0,79 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD120 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

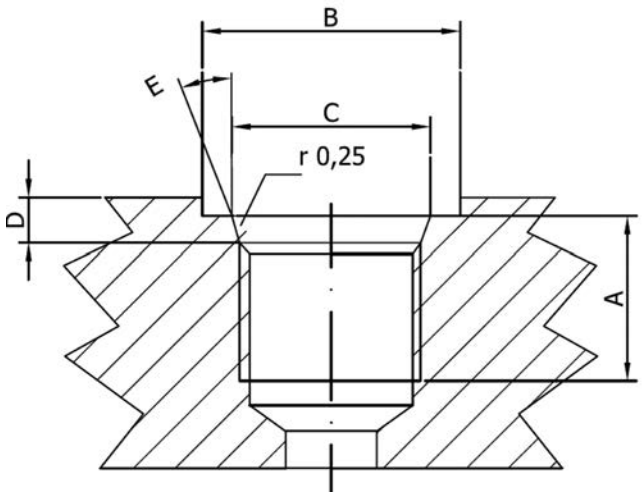

• Before painting, ensure plastic port plugs are tightly in place.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 20 mm – 0,79 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD150 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

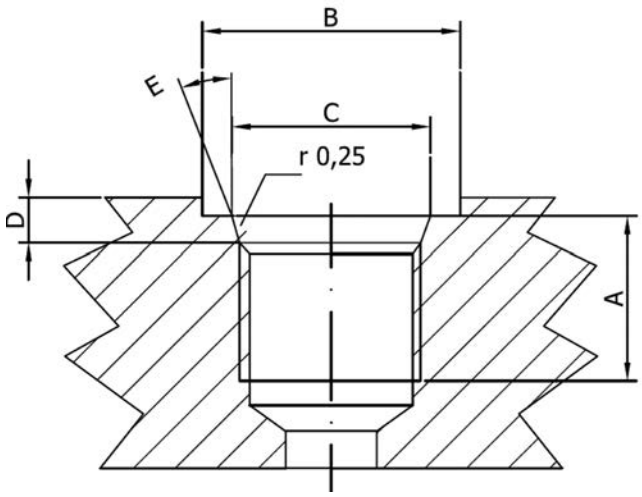

• Before painting, ensure plastic port plugs are tightly in place.

Features

• Simple, compact and heavy duty designed sectional valves from 1 to 12 sections for open and closed center hydraulic systems.
• Optionaly Carry-Over port only tandem circuit.
• Fitted with a main pressure relief valve.
• Interchangeable spool diametre is 25 mm – 0,79 in.
• Available manual, pneumatic, hydraulic and electro-pneumatic spool control kits.

INSTALLATION AND MAINTENANCE

The ORV-PD250 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

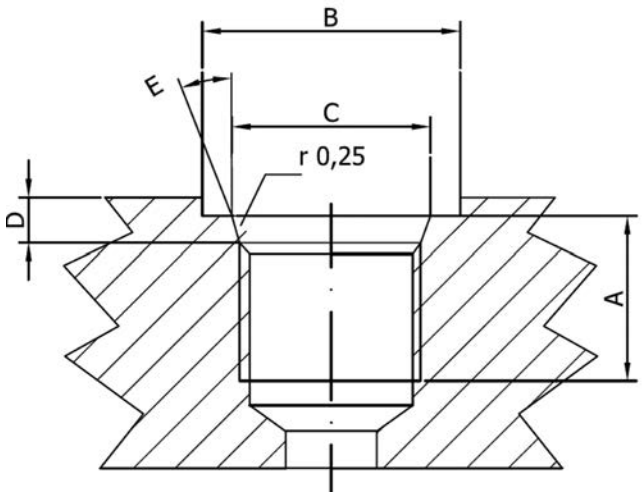

• Before painting, ensure plastic port plugs are tightly in place.

INSTALLATION AND MAINTENANCE

The ORV TV50 valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

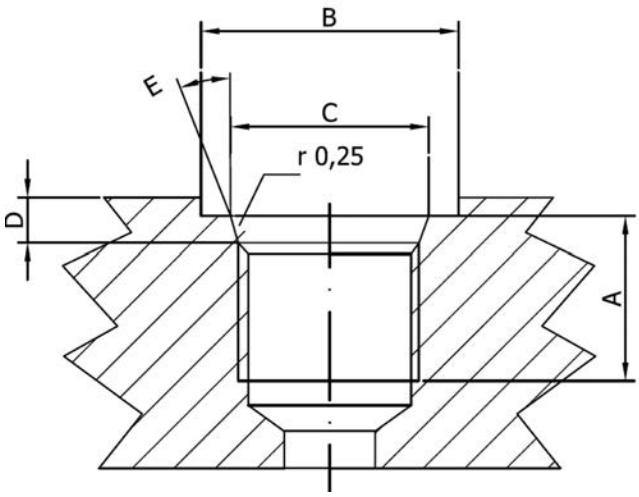

• Before painting, ensure plastic port plugs are tightly in place.

Max. Level Of Contamination	19/16 - ISO 4406	

Not: This catalogue shows technical specifications measured with mineral oil of 46 mm2/s-46 cSt viscosity at 40 C° temparture.

Features

• Simple, compact and heavy duty designed sectional truck mounted valves from 1 to 3 sections for open center hydraulic systems.
• Interchangeable spool diametre is 16 mm – 0,63 in.
• It can be work working section and truck lift for some time.
• It has low tank pressure for additional tank line.
• It can be use single and double acting for only last working section.

Installation

The ORV STR valve is assembled and tested as per the technical specification of this catalog. Before the final installation on your equipment, follow the below recommendation:

• The valve can be assembled in any position, in order to prevent body deformation and spool sticking mount the product on a flat surface;

• In order to prevent the possibility of water entering the lever box and spool control kit, do not use high pressure wash down directly on the valve;

• Before painting, ensure plastic port plugs are tightly in place.

Features

• The 4WE6 valve consists of a high strength iron castings body, a control spool with two centering springs and operating solenoid coils.
• 4/3, 4/2 and 3/2 way directional control
• Two position valves consist of one coil and spring, three position valves utilise two coils and two springs.
• Solenoid coils are 12 & 24VDC, and 110V & 220VAC Coils which have built in rectifiers.
• Wet – pin core tubes and connectors with LED's.
• Service life 10 milion cycle.
• Connections to DIN, ISO and CETOP.
• Optimize spoole design to reduce flow force.

ELECTROMAGNETIC COIL AND CONNECTION

Current Limits

The tests have beem carried out with solenoids at operating temperature and a voltage 10 % less than rated with a fluid temperature of 40 C. The fluid used was a mineral oil with a viscosity of 46 mm2/s at 40 C. The values in the diagram refers to test carried out with the oil flow in two directions simultaneously T=2 bar (e.g.. from P to A and the same B to T). In the case where valves 4/2 and 4/3 were used with the flow in one direction only, limits of use could have variations which may even be negative. Rest times: the volues are indicative and depend on following parameters: hydraulic circuit, fluid used and variations in hydraulics scales (pressure P, flow Q, tempereture T). The limit of use for AC solenoids were detected with 50 Hz power.

Direct Current: Energizing 60 – 90 ms, De-Energizing 25 – 70 ms,

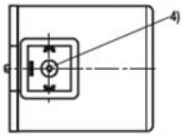

Alternatif Current: Energizing 12 – 30 ms. De- Energizing 10 – 55 ms.

Features

- The 4WE10 valve consists of a high strength iron castings body, a control spool with two centering springs and operating solenoid coils.
- 4/3, 4/2 and 3/2 way directional control
- Two position valves consist of one coil and spring, three position valves utilise two coils and two springs.
- Solenoid coils are 12 & 24VDC, and 110V & 220VAC Coils which have built in rectifiers.
- Wet – pin core tubes and connectors with LED's.
- Service life 10 milion cycle.
- Connections to DIN, ISO and CETOP.
- Optimize spoole design to reduce flow force.

ELECTROMAGNETIC COIL AND CONNECTION

Current Limits

The tests have beem carried out with solenoids at operating temperature and a voltage 10 % less than rated with a fluid temperature of 40 C. The fluid used was a mineral oil with a viscosity of 46 mm2/s at 40 C. The values in the diagram refers to test carried out with the oil flow in two directions simultaneously T=2 bar (e.g.. from P to A and the same B to T). İn the case where valves 4/2 and 4/3 were used with the flow in one direction only, limits of use could have variations which may even be negative. Rest times: the volues are indicative and depend on following parameters: hydraulic circuit, fluid used and variations in hydraulics scales (pressure P, flow Q, tempereture T). The limit of use for AC solenoids were detected with 50 Hz power.

Direct Current: Energizing 30 – 50 ms, De-Energizing 10 – 30 ms,

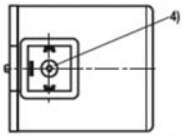

Alternatif Current: Energizing 8 – 30 ms. De- Energizing 15 – 55 ms.
